Application/Control Number: 10/661,119

Art Unit: 1752

This is in response to Election filed on 16 September 2004.

- I. Applicants elect the invention of Group I, claims 1-16, without traverse being acknowledged.
- II. Applicants also elect M-1 species being acknowledged.
- III. Applicants prior art submission filed on 12 September 2003 has been considered to the extent of the English language being provided only.
- IV. The elected M-1 species has been considered and searched. The consideration and search are extended to the applied species. Others have not been considered, searched or examined until the applied species is overcome.
- V. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-16 with respect to the applied species are rejected under 35 U.S.C. 103(a) as being unpatentable over Sugita et al (JP 2003091058) and Mizukawa et al (EP 0 571 959 as submitted.

Application/Control Number: 10/661,119

Art Unit: 1752

Sugita et al disclose, teach and suggest a silver halide color photographic material having a silver halide green forming emulsion layer containing a magenta coupler being read within the 1H-...triazole as broadly claimed. Please see the English language abstract and compound M-3-5 on page 8 Sugita et al in Japanese Patent (An English language translation of this patent will be provided before an examiner answer as required). For the cited embodiments of claims 15 and 16, please see the practiced materials in Examples 3 from page 81 in Mizukawa et al for the conventional or known uses of a reflective support and silver chloride. Since the above references are related to silver halide color photographic materials, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include a reflective support and silver chloride from Mizukawa et al in Sugita et al photographic materials for the desired advantage of seeing an image on the reflective support and rapid processing as conventionally and well known in the art.

VI. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hoa V. Le whose telephone number is 571-272-1332.

The examiner can normally be reached from 6:30 AM to 4:30 PM on Monday though Thursday and about the same time of most Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia Kelly can be reached on 571-272-1526.

Applicants may file a paper by (1) fax with a central facsimile receiving number 703-872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications

Art Unit: 1752

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
